The Solution to Angled Box Installations in New Concrete

Fix it with
LEV-L MASTER™

COMPETITIVELY PRICED. BETTER FEATURES!

FLBC4800
LEV-L MASTER™ Floor Box Kit

Arlington's **LEV-L MASTER™** FLOOR BOX KIT *solves* the 'level cover' problem caused by a box installed at an angle in new concrete.

The black leveling ring flexes to allow the box cover to sit flush with the floor. *There's **NO GLUING!** Screws attach the ring to box, so it's easy to correct any errors just by backing the screws out.*

LEV-L MASTER accommodates a variety of metal and non-metallic covers with flip lids or threaded plugs....for protecting the receptacle when it's not in use.

Costs the same as our FLBC4500 concrete floor box – LEV-L MASTER solves the problems of...

- ***Glue setting too fast***
- ***Boxes installed at an angle***

...and offers a Variety of Cover Choices.

EASY INSTALLATION

1 After the concrete has cured, and the flooring is installed, use a saw to cut the box...

2 ...to the finished floor height.

3 Install the leveling ring on the box...

4 ...with the two #8 x 2-1/2" screws provided. For textured or grooved flooring use caulk as required under the leveling ring.

5 Install the device (sold separately). Wire per National, State and local code requirements

6 Then install the cover (sold separately).
